

People are used to say that water is life. In our village we have experienced this and we bless the Lord who saved us from sickness and death by giving us clean drinking water. Many politicians have promised us the pump, the wells but it never happened.

When the Sun of the Hope Team arrived in our village, they told us that they wanted to do a Bible study program with everybody who wanted to better know the God who created us. But many believed that they already know everything about God so they didn't think it would be useful for them to be involved in such a study.

The discussion and renewal sessions of the program were very interesting. Our group became large. One day the leader of the Sun of Hope came and asked us what their organization can do for the village. We have indicated our need for wells and drinking water. He told us that he wanted to talk with his friends and see if they could find the money to do it.

We didn't believe too much because we were promised several times that without ever realizing it. One morning they returned and told us that they found the money and the drilling of the well will begin the following week. They told us that we had to participate with the sand and stone. It was like a dream but slowly, the well is completed and we have clean water in abundance now. This well was not only a gift but God had mercy of all the women of this village since before this well, our suffering was great. But God is good and manifested his kindness to us.
